A network, in the context of electrical engineering and electronics, is a collection of interconnected components. Network analysis is the process of finding the voltages across, and the currents through, all network components. There are many techniques for calculating these values. However, for the most part, the techniques assume linear components. . Except where stated, the methods ...

Network meta-analysis is a technique for comparing three or more interventions simultaneously in a single analysis by combining both direct and indirect evidence across a network of studies. Network meta-analysis produces estimates of the relative effects between any pair of interventions in the network, and usually yields more precise ...

Synthesis: Qualitative Differs from a Meta-Analysis (Quantitative)
"The goal is not aggregative in the sense of 'adding studies together' as with a meta-analysis. On the contrary, it is interpretative in broadening understanding of a particular phenomenon." (Source: Grant et al (2009)) There are 3 types of synthesis that may be used.
